

Return to Work Safely Program — COVID-19 Testing Options

What's at Stake

Harness Health Partners is passionate about the health and well-being of your workforce. As part of a multi-state health system, we are uniquely positioned to deliver programs that improve both the physical health and fiscal outcomes for companies like yours.

The COVID-19 pandemic has changed the way we look at business and the health and safety of our employees. Harness Health Partners shares your desire to keep employees safe and productive in this time of uncertainty.

As our country starts returning employees back to work, Harness is offering three COVID-19 testing solutions for employers to mitigate the spread of Coronavirus in the work setting so that your employees will feel as safe as possible when returning to the workplace.

Harness can provide the flexibility and clinical insights needed to integrate COVID-19 testing as well as additional health and safety solutions into your workplace return strategy and plans for ongoing business continuity.

Three Platforms for Testing

Premium:

This is our most comprehensive, fully integrated approach that combines testing and guidance from your Occupational Health advocate. This model offers complete clinical and medical support to those employees who test positive, by providing a continuum of care with a focus on decreasing the number of days to return safely to work. Our guidance is updated regularly as we learn more about this virus. Currently, we recognize that prevention and aggressive testing is what leads to optimal results in preventing COVID-19 outbreaks.

Prevention services that are available upon request include:

- Temperature Screenings/CDC questionnaire
- Nurse Access Line/On-site Nursing assistance
- Assist with office environment protocol
- Handwashing education/monitoring
- Trending statistics and other reporting capabilities

This program will aggressively monitor and control outbreaks, assist you in your Return to Work Safely protocol, and manage all aspects from testing to doctor follow-up and care.

This approach is intended to combine prevention with company-directed monitoring and aligns closest to what we currently provide our own employees.

Plus:

Similar to the Premium program, our Plus program offers testing and results along with an “ala carte” menu of other standard Harness offerings, such as Nurse Triage, EAP, SAP, etc. Once testing results are received, we can refer them to their company’s Medical Director (if applicable) or transfer them to the appropriate PCP for continuing care.

Classic:

The Classic program will provide a testing solution tailored to your company’s needs but does not offer clinical guidance or oversight. Under this plan, Harness would test, process and send the results directly to the client. This is the only model that includes standardized pricing.

Bottom Line

Harness understands that not everyone will choose to reopen the same way. While there is not one specific action that makes all the difference, taking a holistic approach to safety will lead to better outcomes as you ease the concerns of employees who make their way back into the workplace.

Implementing one of our testing programs will not only give you peace of mind, it will show your employees the level of respect you have for their health and well-being as you develop plans for ongoing business continuity.

Let us work together to help mitigate the spread of COVID-19 in our communities by reopening cautiously and thoughtfully. Harness will help you define the level of clinical guidance and support you need, and the specific protocols you wish to implement, in order to keep your employees safe during these uncertain times.
